## PROFILE

I am a skilled Backend developer with a year of experience in automation development and a self learned fullstack developer. I have known my way around the Restful API services and microservices and Azure AD. Looking for a new opportunity to push my limits and surpass them in terms of experience and knowledge.

## SKILLS

- Java (Core)
- Node JS
- Python
- Angular JS (Typescript)
- Mongo DB
- MySQL and MS SQL
- MEAN and MERN stack
- React JS (Typescript)
- Restful API and server side scripting
- Groovy script
- Powershell
- Microsoft Azure AD using Exchange online / MG Graph module

## EXPERIENCE

### AUTOMATION DEVELOPER

#### Tata Consultancy Services

JUL 2022 - Present

- Automated several ticket resolution logics from Service Now ITSM tool and used company's proprietary DDL language based tool as automation solution for client retail in Middle east
- Built the logic for Azure AD for onboarding users from clientele end through MG Graph and Migrated the old services to new Modern auth module.
- In Parallel worked in the client's chat BOT and added major enhancement including the OTP based password reset logic and automated the entire flow.
- within a year I was able to handle the team of four and delivered use cases and found solutions that can be automated to reduce the manual work load and delivered error free in time.

## EDUCATION

### SECONDARY SCHOOL

VHN HSS - Madurai, Tamilnadu  
2016 - 2018

### BACHELOR OF ENGINEERING CSE

Anna University Regional campus  
Madurai

SEP 2018 - APR 2022

### HRMS WEBSITE USING MEAN STACK

Anna University Regional Campus Madurai

OCT 2021 - MAR - 2022

- As a final year project I designed a HRMS website for teachers where their attendance and classes and students are tracked.
- The stack I have chosen for is MEAN stack and JWT token for Sign in and sign offs and also for user enrollment.
